

Elomatic is a diversified international provider of consulting and engineering services with extensive experience in energy generation processes.

Our services cover projects' entire life cycles from basic design through to implementation and delivery to the customer. We are able to provide solutions in all energy production and distribution projects.

INVESTMENT PROJECT

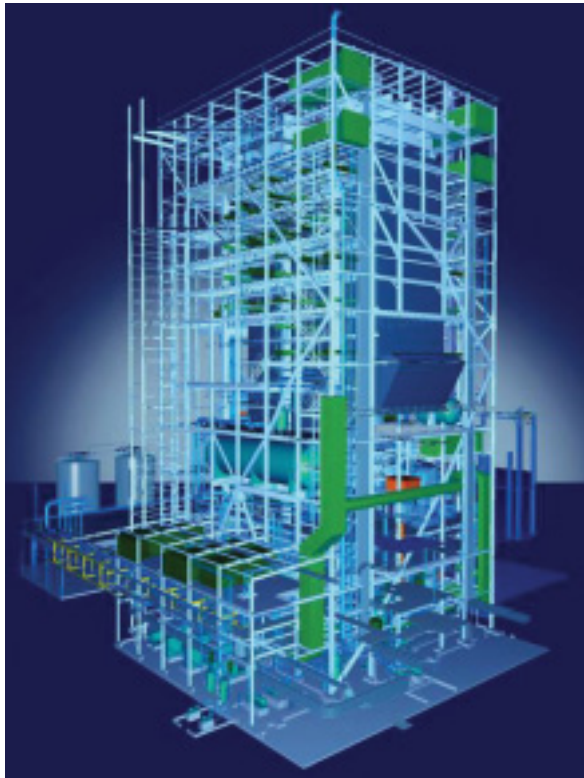

Our services

- Project and feasibility studies
- Regional energy plans
- Business plans
- Measurement services
- Design services
- Project management services
- Competitive bidding
- Energy audits
- District heating network management

Special know-how

- Energy generation
- Heat recovery systems
- Flue gas scrubber
- Bioenergy
- CHP
- District heating
- District cooling
- Energy consulting

Elomatic's energy experts have modern and versatile design software at their disposal

Design services

Plant and mechanical engineering is conducted with modern design tools such as Elomatic's own Cadmatic 3D design software.

Process Vision Ltd's GRADES™ Heating -software is used in measuring and simulating heating networks. Detailed design is done with the AutoCAD-based Fiksu software.

In process simulation Balas® software developed by the VTT Technical Research Centre of Finland is used to check existing or new processes. The effects of different process alternatives and operational levels on energy consumption can be evaluated quickly and cost efficiently.

Competitive bidding and contract consulting

The competitive bidding of contractors, plant suppliers and heat delivery as well as the drawing up of energy sales and project contracts are an important part of our energy services.

Energy audits

Our experts conduct energy audits for industry, communes and real estate companies according to Motiva models. The audit leads to recommendations for financially profitable operations. Diverse measurements and process analyses are also part of our services.

Elomatic offers comprehensive design and expert services for district heating suppliers

Elomatic district heating management

Elomatic's NetInfo service is an internet-based tool for the comprehensive management of district heating networks. It eases and brings efficiencies to district heating network information management. We offer the service on a turnkey basis; the client only requires an internet browser and a NetInfo licence.
